

Tesla Government - DevOps Engineer I

Dear Tesla Government Hiring Team,

I am writing to express my interest in the DevOps Engineer I role at Tesla Government.

With hands-on AWS infrastructure, CI/CD, deployment automation, and security-focused experience from both startup and internship roles, I am excited by the opportunity to contribute to the CKM platform and grow under experienced technical leadership.

At Eden, I helped design, implement, and maintain AWS serverless infrastructure using AWS CDK across 18 CloudFormation stacks and 250+ resources. I built and deployed production-ready services on Lambda, API Gateway, DynamoDB, and VPC networks while enforcing security controls through Secrets Manager, IAM, and CDK-Nag validation.

That work included supporting environment setup across development and production, validating infrastructure changes, and driving operational stability. These key experiences are directly aligned to the infrastructure and environment support responsibilities of this role.

I also have practical experience supporting CI/CD and deployment workflows using secure OIDC authentication, including automation for TypeScript serverless services, release support for backend features, and troubleshooting deployments during MVP delivery.

I transitioned my team to Agile Scrum, established development SOPs, and improved delivery efficiency. These experiences prepared me to work effectively within an outcome driven, collaborative environment such as Tesla Government's.

My background includes the Terraform Associate certification, hands on development experience with AWS CDK, Linux command-line workflows (my daily driver is Ubuntu), Git-based version control, and scripting in TypeScript and Python. I am eager to apply this foundation while continuing to learn IaC concepts, deployment automation, and secure cloud operations, including in regulatory environments dealing with HIPAA and SOC II. I am especially motivated by the chance to support a government-focused platform and contribute reliably while building toward independent ownership.

Thank you for considering my application. I look forward to the opportunity to support Tesla Government's mission and help maintain stable, secure, and automated delivery for the CKM platform.

Sincerely,

Marcus Roldan
